

## Project Design Phase-II

### Solution Requirements (Functional & Non-functional)

|               |                                                        |
|---------------|--------------------------------------------------------|
| Date          | 27-06-2026                                             |
| Team ID       | 23A51A05G8                                             |
| Project Name  | Software Installation Request Automation in ServiceNow |
| Maximum Marks | 4 Marks                                                |

#### Functional Requirements:

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic)    | Sub Requirement (Story / Sub-Task)                                                                                                                |
|--------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Software Request Submission      | Select Software from Catalog<br>Enter Business Justification<br>Select Urgency Level<br>Enter Device Name                                         |
| FR-2   | License Availability Check       | Check Available License Count<br>Display Software License Type<br>Block Request if No Licenses Available                                          |
| FR-3   | Request Record Creation          | Create Software Request Record<br>Auto Set Request Date<br>Set Approval Status to Pending<br>Set Fulfillment Status to Not Started                |
| FR-4   | Manager Approval Workflow        | Send Approval Request to Manager<br>Manager Approves or Rejects Request<br>Update Approval Status Automatically                                   |
| FR-5   | Email Notification Management    | Send Request Received Email to Employee<br>Send Approval / Rejection Email to Employee<br>Send Installation Completed Email to Employee           |
| FR-6   | IT Task & Fulfillment Management | Create IT Task on Approval<br>IT Team Installs Software and Closes Task<br>Update Fulfillment Status to Completed<br>Decrement License Count by 1 |

#### Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description                                                                                                                                                                   |
|--------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1  | Usability                  | The system should provide a simple, intuitive, and user-friendly interface that allows employees to submit software installation requests easily without technical knowledge. |

|       |              |                                                                                                                                                                                         |
|-------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-2 | Security     | The system should ensure secure access through authenticated user accounts, role-based access controls (sw_approver, sw_fulfiller), and secure data transmission using HTTPS protocols. |
| NFR-3 | Reliability  | The system should consistently process software requests, approvals, and email notifications with minimal errors or downtime.                                                           |
| NFR-4 | Performance  | The system should process software requests, trigger approval workflows, create IT tasks, and send email notifications within a few seconds to provide a smooth user experience.        |
| NFR-5 | Availability | The application should be accessible 24x7 through the ServiceNow cloud platform availability to all users.                                                                              |
| NFR-6 | Scalability  | The system should support an increasing number of users, software requests, and catalog items without significant degradation in performance.                                           |
