

Project Design Phase

Proposed Solution Template

Date	27-06-2026
Team ID	23A51A05G8
Project Name	Software Installation Request Automation
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1	Problem Statement	Organizations manually process software installation requests through emails, causing approval delays, poor license tracking and inefficient IT operations.
2	Idea / Solution Description	Develop a ServiceNow application that allows employees to request licensed software through the Service Catalog while automating approvals, IT task creation, notifications and fulfillment.
3	Novelty / Uniqueness	Combines Service Catalog, Flow Designer, Business Rules, email notifications and license management into one automated workflow.
4	Social Impact / Customer Satisfaction	Reduces processing time, improves employee productivity, increases transparency and enhances user satisfaction.
5	Business Model (Revenue Model)	Helps organizations reduce IT support costs, improve software license utilization and streamline IT service management.
6	Scalability of the Solution	Can easily scale to multiple departments, software catalogs, enterprise users and future integrations such as Asset Management and CMDB.
